KSA-I Steam Assist...

- **Improve Bonding Quality;**
- **Faster Multi-Wall Speeds;**
- **Faster Heavy Liner Speeds;**
- **Stainless Steel Construction;**
- **On/Off Auto Control**
- **Motorized Valve for Positive Control; and**
- **Safety Features Included.**

The **Hmb Model KSA-I Steam Assist** is fabricated from durable stainless steel. It provides improved production speeds of multi-wall corrugated and heavy liner by introducing heat directly to the glue lines prior to bonding. This permits the adhesive to "pre-gel" by raising the BTU level of the glue line before the double-backer, and better insures that the adhesive will have enough heat to set, bond and cure, before reaching the cut-off end of your corrugator. All the safety features, incorporated since this equipment was first introduced to the corrugated industry, will be found in the **KSA-I**.

Rotary Dust Removal System

Save Money by Keeping your Corrugator Belt Clean on a Daily Basis, Automatically...

Daily Corrugator Belt Maintenance Increases the Life of your Corrugator Belt and Pays for Itself...

The **HMB Rotary Dust Removal System** is designed to be installed on the Double Backer section of your corrugator. Corrugator Belt runs between the bottom Pressure Roll and top Spiral Brush. When engaged, spiral brushes come down in contact with the Corrugator Belt and clean surface. You select engagement time with 2-function timer (shown above left).

The system is made of rows of nylon bristle brushes, mounted on a shaft in a spiral configuration. It also features a push-button control panel which is mounted for convenient access. The system comes fully wired for easy installation. Electrical is 230v/460v, 3 phase and requires 80 psi air. Brush gives many years of wear. We supply replacement brushes.

Hmb Manufactures a Complete Line of Roll-Type Wax Impregnators...

These impregnators offer the corrugated industry a complete wax or sustainable waterproof coating for combined board. This control is achieved by applying the coating material to a web, medium or liner. Bridge or floor mounted availability. Other options are available.
