

**THE LIONGRIP® WEIGHTLESS COMPONENT HANDLER  
FOR USE IN A VARIETY OF APPLICATIONS AND INDUSTRIES.**

**LIONGRIP® IS A FLEXIBLE LIFTING AID FOR INDUSTRY IN GENERAL.**

In its standard configuration, the lift can handle weights up to 330 lb and it has a working radius of up to 12 feet and more than 400° working area. The simple design, installation and operation make the lift a most cost effective tool.

**FUNCTION:**

A pressure sensitive control handle on the lift causes the lifting arm to follow the operator's slightest movements up or down. As a result, the weight being handled is never borne the operator who is then free to place the component in place.

**ELASTICITY :**

The elastic suspension of the arm means the lift is "forgiving". Therefore the operator does not need to be right on target on each occasion.

The lift can be used for easy handling of: reels, shafts, sleeves, pallets, tools, products in production line etc.
