

Are you losing valuable production time and money on your corrugator due to bagging, wrinkling, uneven heat transfer, weaving or warp?

The Equaliner 1000

- Equalizes cross-web tension;
- Improves heat transfer and bonding;
- Compensates for worn or misaligned components;
- Has 360° correction capability, that allows for use in wrap arm dancer and idler rolls;
- Is 100% mechanical;
- Self-aligns;
- Is easy to install; and
- Requires minimal Maintenance;

Replaces Wrap Roll on Preheaters and Preconditioners

Equaliner 1000™

Web Tension Stabilizing System

The Equaliner 1000 is a patented system designed for corrugators to eliminate cross-web tension problems, improve quality and increase running speeds. Its unique method of “reading” and “self-aligning”, allows the substrate to track straight, by continually correcting for web tension imbalance. **The Equaliner 1000** reacts to the web, DOES NOT steer the web.

The Equaliner 1000 is a stand-alone replacement for wrap arm rolls, dancer rolls and intermediate idler rolls. It is compact and 100% mechanical, requiring no external power. It is 6” OD and comes in all sizes of corrugator widths.

To learn more, contact **Gary Lovelace**, easiest way is e-mail.

MAINTENANCE

The Equaliner works 24 hours a day, 7 days a week adjusting for tight and loose webs, out of alignments and even bad bearings. Sooner or later the packing and perhaps even the bearings will wear out, and if these are not replaced when necessary other parts can begin to wear out.. Over the years we have noticed that some plants regularly replace packing (recommended once a year) and bearings (inspect when replacing packing), other plants we never hear from. Sooner or later they send one in for a complete rebuild. An Equaliner is much like your car, take care of it and it will take care of you, and if you do not take care of it, prepare for big problems down the road.

Equaliner 1000 Parts

(1) Balance Ring; (2) Packing; (3) Outer Bearing; (4) Packing Housing; (5) Bearing Housing; (6) Expansion Sleeves; and (7) Center Bearing.

The part shown below, (2) Packing is made of a very durable heat resistant silicone, that is 60 durometer. P/N EQI-6P80 are \$99. each.

Equa-Liner 1000 Spec Sheet for Quote

Customer _____

Address _____ Contact _____

City _____ State _____ Zip _____

Date of Order _____ FAX _____

Phone _____ E-Mail _____

The Equa-Liner 1000 is designed to replace the Wrap Arm Roll in the position of you want it located. Please specify the following dimensions of your Wrap Roll.

Wrap Roll Make/Model _____

Overall Length of Wrap Arm Roll (including journals) _____

Outside diameter of journal _____ Maximum Paper Width _____

We manufacture the actual face length of the Equa-Liner 1000, 3" wider than your maximum paper width (98"=101", etc.) for optimum performance. List the actual dimensions above. Please list any other important information on an additional piece of paper and FAX to follow this sheet.
